

Exercise 1 - Theorem of residues

(3 points)

Applying the theorem of residues,

a). calculate the Fourier transform of

$$f(x) = \frac{1}{x^2 + a^2} , \quad (1)$$

where  $x$  is a one-dimensional real variable and  $a$  is a real number.

b). and verify the integral representation of the  $\theta$  function

$$\theta(t - t') = \lim_{\eta \rightarrow 0^+} - \int_{-\infty}^{\infty} \frac{d\omega}{2\pi i} \frac{e^{-i\omega(t-t')}}{\omega + i\eta} . \quad (2)$$

Exercise 2 - Ground state properties of the Fermi gas

(2 points)

In the lecture you derived the ground state energy of the Fermi-gas as

$$E_0 := \langle \Psi_0 | H | \Psi_0 \rangle = \frac{3}{5} N E_F . \quad (3)$$

Show explicitly that the relation

$$E_0(N + 1) - E_0(N) = \mu , \quad (4)$$

is fulfilled for a Fermi gas at  $T = 0$ . Note that at  $T = 0$ , the chemical potential  $\mu$  is just the Fermi energy.
